

How To Put Less Film In Your Trash Can And More Film On Your Customer's Windows.

40" X 100' Roll = Waste!

40" is the ideal size for Computer Cut Systems.

40" x 100' has become the most popular size over the last few years - for those companies that still cut out patterns on vehicle glass this is the size that produces the most waste. Many back windows are less than 40" high. 40" rolls also produce a large amount of waste on side windows. Many side windows are 18" (or less) and pickup trucks are often more than 20", which really waste film. There is a much smarter way to order!

It makes much better sense to order your film on 60" and then take advantage of our custom cutting. We have learned from our savvy and experienced dealers that buying a 60" wide roll slit down to 38" / 22" produces the smallest amount of waste. Here's how it works:

ORDER A 60" Roll – WE CAN SLIT IT FOR YOU 38" / 22"
It's like getting three perfect sized rolls in one! Here's how:

60" X 100' Roll – Custom Cut To 38" / 22"

The 38" roll does EVERY back window!
That's an immediate 5% savings!

The 22" roll works for all the oversize side windows – like pickups.

38" X 100'

22" X 100'

19" x 100'

19" x 100'

Save even more by slitting the 38" roll in half to 19" / 19" on your own, whenever you need to.
It works for almost every car side glass!
